

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

**Using a single factory function that takes the book object as a parameter and returns the HTML element presenting the book preview.**

---

2. What parts of encapsulating your logic were hard?

**I think it's hard in the sense of keeping track of where changes need to be made in the code base and ensuring that everything works as it should.**

---

3. Is abstracting the book preview a good or bad idea? Why?

**I think it's both good and bad. Good, because it keeps everything readable and maintainable, by being straight forward and specific in your code and comments and ensuring that nothing is being repeated and over-used in your code.**

**Bad, because I feel that because there are so many factors to consider, that it's hard to keep track of where everything is and ensuring that if changes are made to functions and objects, that they are updated and corrected elsewhere in the code as well.**
